

National Capabilities

At PCC Network Solutions, it's more than industry knowledge and industry standards that large clients rely on. They count on our reputation as a business partner that will always look out for their best interests. That commitment enables our clients to focus on their business and trust us to develop solutions that empower them to be successful.

PCC is perfectly structured to serve large clients with multiple facilities or campus environments situated in major cities across the United States. PCC is expert at coordinating multiple projects simultaneously while delivering very significant cost savings – especially when compared to a large organization maintaining internal staff (expertise/management).

We are accustomed to designing, building, and delivering major projects and serving our existing clients' daily requirements for moves, adds and changes (MAC) related to their telecommunications infrastructure, wireless, and physical security deployments. Our customers rely on us to deliver consistent services even if multiple facilities and data centers are vastly different in size and configuration.

WE DO JUST ABOUT EVERYTHING – EXCEPT COMPROMISE • At PCC Network Solutions, our expertise includes design & engineering, project management, installation, and ongoing maintenance – all available from any of our regional offices. When we are asked to extend our services in more remote locations, trusted, qualified, certified subcontractor partners are managed by a PCC Project Manager, your single point of contact, to perform the field work according to our demanding specifications. For our clients, it means aesthetic consistency, common labeling schemes/naming conventions, identical testing parameters, formatted test results, and other as-built documentation, including CAD drawings and interconnection tables.

VOLUME MATERIAL DISCOUNTS • We take pride in helping our customers create greater budgetary leverage by bundling forecasted material/equipment expenditures. PCC works aggressively with manufacturers and distributors to negotiate cost-effective pricing proportional to the demonstrated or forecasted volume requirements. Since cabling infrastructure typically comprises less than 5% of the total IT budget, it rarely gets the focused attention of executive management. Additionally, this is an area of cost savings often overlooked by companies with less experience than PCC. It's just one more way we exceed expectations.

FOUR OFFICES. ONE PHILOSOPHY • Every PCC office location can provide a consistent breadth of capabilities with results that are extremely efficient and affordable for our clients. Our goal is to make everything, including data centers, main distribution frames, telecommunication rooms, and workstation locations/outlets maintain a consistent look, feel, and documentation characteristics. PCC leverages our stringent manufacturer partner programs to engage local subcontractors of like size, capability, and competency to expertly complete the work. Local representatives from manufacturers and distributors are queried to identify the best-trained, most reputable contractors for the project. Ultimately, all our customers' needs become the responsibility of PCC. It all adds up to a solution that gives our clients the peace of mind that comes with knowing that the work and service they get is unmatched in quality and value.
